

5 at least one cup-shaped transducer submerged in the liquid and focused to direct its  
6 output to a point approximately at the liquid level; and  
7 motive means for causing a flow of a carrier gas to carry the aerosol from the  
8 chamber through the outlet port.

1 2. (Amended) The apparatus of claim 1 further comprising means for adjusting the  
2 depth that the at least one transducer is submerged below the liquid level in order to focus its output.

### REMARKS

Claims 1-44 remain in this application. Applicants respectfully request that the amendments to claims 1 and 2 be entered prior to examination.

Respectfully submitted,

CHRISTIE, PARKER & HALE, LLP
